Resolution

Topic or Information

Printing to Zebra Printers from SAP:

Applies To

Zebra Printers used with SAP

Details

There are two methods directly supported by Zebra that one can use when printing to Zebra printers from an SAP System.

Note: Both methods provide the ability to print Unicode characters.

1. *SAP Smart Forms* (or Smartforms): drivers or device types for this method are provided as part of the SAP implementation. Check these two Net Notes available from SAP and make sure you have the supported packages and kernel patches applied.

75002 (4.6c or earlier)

Printing from SAP Smart Forms to Zebra printers [Read More>>](https://www.zebra.com/us/en/partners/partnersfirst-partners/alliance-partners/erp/sap-smart-forms.html) (<https://www.zebra.com/us/en/partners/partnersfirst-partners/alliance-partners/erp/sap-smart-forms.html>)

2. *SAP Script* upload method: You must order Zebra Designer for mySAP software. This software can generate .itf files which include ZPL commands and SAP script. You can then upload the file into SAP.
